R Journal Editors,

I am writing in submission of the article *spinifex: An R Package for Creating a Manual Tour of Low-dimensional Projections of Multivariate Data*. The paper explains the algorithm for performing dynamic low-dimension projections, gives examples and demonstrates application of the corresponding CRAN package *spinifex*.

The article is not under review with other journals, contains original work, and all authors are in agreement in publishing with R Journal.

Sincerely,

Nicholas Spyrison
