

29 June 2019
R Journal Editors,

I am writing in submission of the article *spinifex: An R Package for Creating a Manual Tour of Low-dimensional Projections of Multivariate Data*. The paper explains the algorithm for performing dynamic low-dimension projections, gives examples and demonstrates application of the corresponding CRAN package *spinifex*.

This is a follow-up from the 2019-66 submission of the same article after reviewing the author guide pdf file. This article is not under review with other journals, contains original work, and both authors are in agreement in publishing with R Journal.

Sincerely,
Nicholas Spyrison
